

**KESHAV MEMORIAL INSTITUTE OF TECHNOLOGY**  
**(AN AUTONOMOUS INSTITUTION)**

Accredited by NBA & NAAC, Approved by AICTE, Affiliated to JNTUH,  
Narayanguda, Hyderabad – 500029

**DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

**LAB RECORD**

**FRONT END WEB DEVELOPEMENT LAB**

**B.Tech. III YEAR II SEM (KR21)**

**ACADEMIC YEAR 2023-24**

**KESHAV MEMORIAL INSTITUTE OF TECHNOLOGY  
(AN AUTONOMOUS INSTITUTE)**

**Accredited by NBA & NAAC, Approved by AICTE, Affiliated to JNTUH, Hyderabad  
Department of Computer Science & Engineering**

## **Certificate**

This is to certify that following is a Bonafide Record of the workbook task done by

\_\_\_\_\_ bearing Roll No \_\_\_\_\_ of \_\_\_\_\_

Branch of \_\_\_\_\_ year B.Tech Course in the \_\_\_\_\_

Subject during the Academic year \_\_\_\_\_ & \_\_\_\_\_ under our supervision.

Number of week tasks completed: \_\_\_\_\_

Signature of Staff Member Incharge

Signature of Head of the Dept.

**KESHAV MEMORIAL INSTITUTE OF TECHNOLOGY  
(AN AUTONOMOUS INSTITUTE)**

**Accredited by NBA & NAAC, Approved by AICTE, Affiliated to JNTUH, Hyderabad  
Department of Computer Science & Engineering**

### **Daily Laboratory Assessment Sheet**

Name of the Lab:

Name of the Student:

Class:

HT.No:

<b>S.No.</b>	<b>Name of the Experiment</b>	<b>Date</b>	<b>Observation Marks (5M)</b>	<b>Record Marks (5M)</b>	<b>Viva Voice Marks (5M)</b>	<b>Total Marks (15M)</b>	<b>Signature of Faculty</b>
	<b>TOTAL</b>						

**Faculty Incharge**

### List Of Experiments

Exp No.	Experiment Name	Page No.
1	Create your portfolio page using HTML tags	
2	Update the portfolio page by adding styles to it. Add a contact Us form as well.	
3	Update the same page using external style sheets or move the added styles to a CSS file and add it to the HTML page	
4	Update the portfolio page to use Bootstrap	
5	Create Home, AboutUs, Products, Partners, Contact Us pages for a static e-commerce website using Bootstrap. Add a gallery page using Bootstrap grid model. Add Navbar, header and footer to all pages. Add a Login link (Modal).	
6	Add a weather component to the home page of the above website, using ReactJS.	
7	Update the 'contact us' page to a ReactJS component. An email should be sent each time contact us form is submitted	
8	Add a Login component using ReactJS. User should be able to login, using pre-defined logins. Session should be maintained using react hooks	
9	Each page in the site should be a React JS component and the elements in each page should be child components.	
10	React Routing should be used to take care of routing from browser location bar and also from Navbar	

## EXPERIMENT 1

### 1. Create your portfolio page using HTML tags

Code:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Profile Page</title>
</head>
<body>

<h1 >Jane Doe</h1>
  
  <h3> Email: janedoe@johndoe.com</h3>
  <h3> Mobile Number :000-000-0000</h3>
  <hr width="100%" >
  <h3> Career Objective</h3>
  Seeking a responsible career opportunity in the field of
  Computer Science where I can utilize my logical and
  technical skills towards personal and professional development

  <h3> Academic Information </h3>

## Lab Experiment 6

Lab6.js

```
import React, { useState, useEffect } from 'react'; import axios
from 'axios';

const Lab6 = () => {
  const [weather, setWeather] = useState(null); const [loading,
  setLoading] = useState(true); const [error, setError] =
  useState(null);

  const city = "Hyderabad"; //Replace with any city name
  const apiKey = '61a1d8419f9d307924240958d89e284d'; // Replace with
  your actual OpenWeatherMap API key

  useEffect(() => {
    const fetchWeather = async () => { try {
    const response = await axios.get(

    `https://api.openweathermap.org/data/2.5/weather?q=${city}&appid=${a
    piKey}`
    );
    setWeather(response.data); setLoading(false);
    } catch (err) { setError(err); setLoading(false);
    }
    };

    fetchWeather();
  }, []);

  if (loading) return <p>Loading weather...</p>;
  if (error) return <p>Error fetching weather: {error.message}</p>;

  return (
    <div>
    <h2>Weather in {weather.name}</h2>
    <p>Temperature: {(weather.main.temp - 273.15).toFixed(2)}°C</p>
    <p>Condition: {weather.weather[0].description}</p>
    </div>
  );
};

export default Lab6;
```

App.js

```
import './App.css';
import Lab6 from './components/Lab6';

function App() { return (
  <div className="App">
    <header className="App-header">
      <Lab6/>
    </header>
  </div>
);
export default App;
```

Expected Output:

## Experiment - 7

Update the 'contact us' page to a ReactJS component. An email should be sent each time contact us form is submitted

EmailForm.js

```
import React, { useState } from 'react';

import './Emailform.css'; // Make sure to import the CSS file

const formConfig = [
  { id: 1, type: "text", name: "firstName", placeholder: "First Name" },
  { id: 2, type: "text", name: "lastName", placeholder: "Last Name" },
  { id: 3, type: "email", name: "email", placeholder: "Email" },
  { id: 4, type: "textarea", name: "message", placeholder: "Message" },
];

// Custom Dynamic Input Component
function InputField({ type, name, placeholder, value, onChange }) {
  if (type === "textarea") {
    return (
      <textarea
        className="form-textarea"
        name={name}
        placeholder={placeholder}
        value={value}
        onChange={onChange}
        required
      />
    );
  }

  return (
    <input
      className="form-input"
      type={type}
      name={name}
      placeholder={placeholder}
```

```
    value={value}
    onChange={onChange}
    required
  />
);
}

  font-size: 16px;
}
```

```
.form-input:focus,
.form-textarea:focus {
  border-color: #007BFF;
```

```
outline: none;  
}
```

```
.form-textarea {  
  resize: vertical;  
  height: 100px;  
}
```

```
.form-button {  
  padding: 10px 20px;  
  background-color: #007BFF;  
  color: white;  
  border: none;  
  border-radius: 4px;  
  cursor: pointer;  
  font-size: 16px;  
}
```

```
.form-button:hover {  
  background-color: #0056b3;  
}
```

App.js

```
import React from 'react';  
import EmailForm from './components/Form';
```

```
const App = () => {  
  return (  
    <div>  
      <EmailForm/>  
    </div>  
  );  
};
```

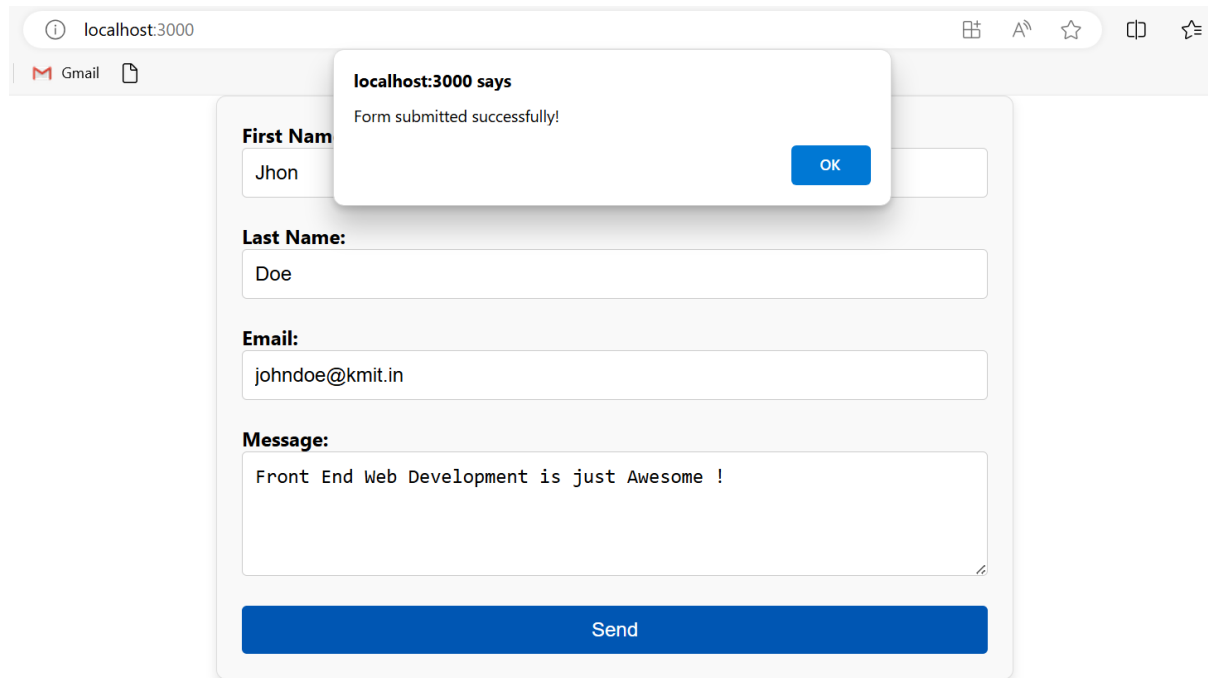

export default App;

Expected Output:

A screenshot of a web browser window displaying a form. The browser's address bar shows 'localhost:3000'. The form is centered on the page and contains the following elements:

- First Name:** A text input field containing the value 'Jhon'.
- Last Name:** A text input field containing the value 'Doe'.
- Email:** A text input field containing the value 'johndoe@kmit.in'.
- Message:** A text area containing the text 'Front End Web Development is just Awesome !!'.
- Send:** A blue button located at the bottom of the form.

## Lab Experiment 8

**Add a Login component using ReactJs. User should be able to login, using pre-defined logins. Session should be maintained using react hooks.**

To create a login component in React that uses predefined logins and maintains a session using hooks, follow these steps:

1. Set Up the Project
2. Create a Context for Authentication
3. Create the Login Component
4. Create a Component to Display After Login
5. Integrate Everything in the App Component

### Set Up the Project

Ensure you have a React project set up. If not, create one using Create React App:

```
npx create-react-app login-app
```

```
cd login-app
```

```
npm start
```

### Create a Context for Authentication

We'll create a context to manage authentication state and session.

**src/AuthContext.js**

Manages the authentication state and provides login and logout functions.

```
import React, { createContext, useState, useEffect } from 'react';

// Create a context for authentication export const AuthContext = createContext();

const AuthProvider = ({ children }) => { const [user, setUser] = useState(null);

// Load user from localStorage if available useEffect(() => {
const storedUser = localStorage.getItem('user'); if (storedUser) {
setUser(JSON.parse(storedUser));
}, []);

const login = (username, password) => {
// Define pre-defined users const predefinedUsers = [
{ username: 'user1', password: 'pass1' }
```

```

if (user) { setUser(user);
localStorage.setItem('user', JSON.stringify(user)); return true;
}
return false;
};

const logout = () => { setUser(null); localStorage.removeItem('user');
};

return (
<AuthContext.Provider value={{ user, login, logout }}>

```

### Create the Login Component

Next, create the Login component that uses the AuthContext to handle login.

#### src/Login.js

Handles user input for username and password, and attempts to log in using the AuthContext.

```

import React, { useState, useContext } from 'react'; import { AuthContext } from './AuthContext';

const Login = () => {
const [username, setUsername] = useState(""); const [password, setPassword] = useState(""); const
[error, setError] = useState(""); const { login } = useContext(AuthContext);

const handleSubmit = (e) => { e.preventDefault();
if (login(username, password)) { setError("");
// Redirect or update the UI as needed
} else {
setError('Invalid username or password');
}
};

return (
<div>

```

```

onChange={(e) => setUsername(e.target.value)}
/>
</div>
<div>
<label>Password: </label>
<input
type="password" value={password}
onChange={(e) => setPassword(e.target.value)}
/>
</div>
<button type="submit">Login</button>

```

### Create a Component to Display After Login

We'll create a simple component that displays a welcome message and a logout button.

#### src/Home.js

Displays a welcome message and a logout button for logged-in users.

```

import React, { useContext } from 'react'; import { AuthContext } from './AuthContext';

const Home = () => {
const { user, logout } = useContext(AuthContext);

return (
<div>
<h2>Welcome, {user.username}!</h2>
<button onClick={logout}>Logout</button>

```

### Integrate Everything in the App Component

Finally, we'll integrate the Login and Home components in the App component, and conditionally render them based on the authentication state.

#### src/App.js

Conditionally renders the Login or Home component based on the user's authentication state.

```

import React, { useContext } from 'react';
import AuthProvider, { AuthContext } from './AuthContext'; import Login from './Login';
import Home from './Home';

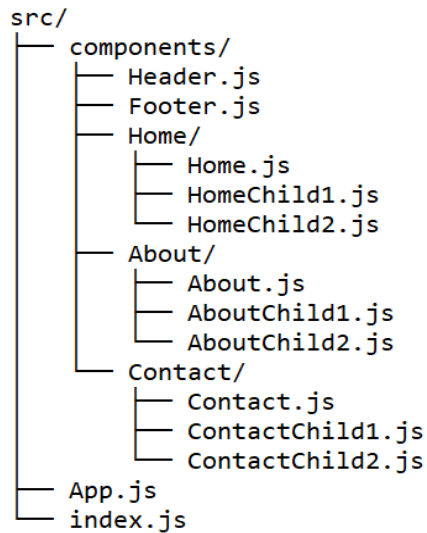

```

```
function App() {  
  const { user } = useContext(AuthContext);  
  
  return (  
    <div className="App">  
      {user ? <Home /> : <Login />}  
    </div>  
  );  
}
```

---

## Experiment - 9

Each page in the site should be a React JS component and the elements in each page should be child components

### Header.js

```
import React from 'react';

const Header = () => {
  return (
    <header>
      <h1>My Website</h1>
      <nav>
        <a href="/">Home</a>
        <a href="/about">About</a>
        <a href="/contact">Contact</a>
      </nav>
    </header>
  );
};

export default Header;
```

### Footer.js

```
import React from 'react';
```

```
const Footer = () => {  
  return <footer>© 2024 My Website</footer>;  
};
```

```
export default Footer;
```

Home/Home.js

```
import React from 'react';
```

```
import HomeChild1 from './HomeChild1';
```

```
import HomeChild2 from './HomeChild2';
```

```
const Home = () => {  
  return (  
    <div>  
      <h2>Home Page</h2>  
      <HomeChild1 />  
      <HomeChild2 />  
    </div>  
  );  
};
```

```
export default Home;
```

Home/HomeChild1.js

```
import React from 'react';
```

```
const HomeChild1 = () => {  
  return <div>Home Child 1 Content</div>;  
};
```

```
export default HomeChild1;
```

Home/HomeChild2.js

```
import React from 'react';
```

```
const HomeChild2 = () => {  
  return <div>Home Child 2 Content</div>;  
};
```

```
export default HomeChild2;
```

About/Abuot.js

```
import React from 'react';
import AboutChild1 from './AboutChild1';
import AboutChild2 from './AboutChild2';
const About = () => {
  return (
    <div>
      <h2>About Page</h2>
      <AboutChild1 /> <AboutChild2 /> </div>
    );
};
```

```
export default About;
```

About/Aboutchild1.js

```
import React from 'react';
const AboutChild1 = () => {
  return <div>About Child 1 Content</div>;
};
```

```
export default AboutChild1;
```

About/Aboutchild2.js

```
import React from 'react';
const AboutChild2 = () => {
  return <div>About Child 2 Content</div>;
};
```

```
export default AboutChild2;
```

Apps.js

```
import React from 'react';

import Home from './components/Home/Home';
```

```
const App = () => {
```

```
  return (
    <div>
```

```
<Home/>

</div>

);

};

export default App;
```

Expected Output:

## Experiment – 10

React Routing should be used to take care of routing from browser location bar and also from Navbar

App.js

```
import React from 'react';  
  
import { BrowserRouter as Router, Route, Routes } from 'react-router-dom';  
  
import Home from './components/Home';  
import About from './components/About';  
import Contact from './components/Contact';  
import Navbar from './components/Navbar';
```

```
function App() {  
  return (  
    <Router>  
      <div>  
        <Navbar />  
        <Routes>  
          <Route path="/" element={<Home />} />  
          <Route path="/about" element={<About />} />  
          <Route path="/contact" element={<Contact />} />  
        </Routes>  
      </div>  
    </Router>  
  );  
}
```

```
export default App;
```

Home.js

```
import React from 'react';
```

```
const Home = () => {  
  return (  
    <div>  
      <h1>Home Page</h1>  
      <p>Welcome to the Home page!</p>  
    </div>  
  );  
}
```

```
export default Home;
```

About.js

```
import React from 'react';
```

```
const About = () => {  
  return (  
    <div>  
      <h1>About Page</h1>  
      <p>Welcome to the About page!</p>  
    </div>  
  );  
}
```

```
export default About;
```

Contact.js

```
import React from 'react';
```

```
const Contact = () => {
```

```
return (  
  <div>  
    <h1>Contact Page</h1>  
    <p>Welcome to the Contact page!</p>  
  </div>  
);  
}
```

```
export default Contact;
```

Expected Output:

## Home Page

Welcome to the Home page!

## About Page

Welcome to the About page!

## Contact Page

Welcome to the Contact page!
